

With the MAXXMEE radiant heater you can enjoy the time outside, even in colder temperatures. Thanks to the infrared technology, you can feel the heat immediately without a long warm-up time. You can choose between three heating levels: 600, 1300 or 2000 watts. The radiated infrared heat then enables cozy hours into the cold night. The heating head can be tilted up to 45° and the telescopic rod can be adjusted in height from approx. 180 - 210 cm. The stable base of the infrared heater also ensures safe use. With practical cable routing.
