| <p>Refrigerant leaks contribute to climate change. Refrigerants with a lower global warming potential contribute less to global warming in the event of a leak than those with a higher global warming potential. This appliance contains refrigerant with a global warming potential of 3. Therefore, a leak of 1 kg of this refrigerant would have a 3 times greater impact on global warming than 1 kg of CO<sub>2</sub> over a hundred years. Do not carry out any work on the refrigeration circuit or dismantle the appliance - always call in qualified personnel.</p> |                                                                                                                                                                         |
