Evoluent4

Research

Unnatural postures are a risk factor for development of complaints of wrist and forearm (Karlqvist 1994, Jensen 1998, Hagberg 1994). When the mouse is positioned closer to the body the strain of shoulders and neck decreases (Armstrom 1995, Cook 1998). Productivity is lower when using a trackball and touchpad, standard mice and pen tablets enable a higher productivity.

- 1. Comfortable handsupport
- 2. Adjustable pointer speed
- 3. Left-handed version

www.bakkerelkhuizen.com - info@bakkerelkhuizen.com

Ergonomic: supports your hand in a fully upright neutral handshake position that eliminates forearm twisting

Precise: true optical resolution sensor moves the pointer quickly to reduce hand movements, with short habituation time

Version 4 improved shape: better thumb and finger support

Version 4 convenient adjustment: of pointer speed

Small version available: for hands less than about 7 inches or 178mm long from the tip of the middle finger to the wrist crease (BNEEVR4S)

Cable length: 215 cm

Specifications

Dimensions: 86 x 81 x 106 mm (W x H x D)

Weight: 173 g

Product code: BNEEVR4 (Righthanded)

BNEEVL4 (Lefthanded)

Health & Safety Regulations

The handshake position of vertical mice keeps the wrist from bending as much to the side while the forearm also turns inward to a lesser degree (Schmid, et al., 2015). This means that muscle activity in the forearm is less than it would be when using a conventional mouse (Quemelo & Vieira, 2013).

Research has shown that the use of a vertical joystick mouse ensures a faster recovery from forearm, wrist and hand complaints (Aarås, et al., 2001).
