

LED strip aluminium profile set 2 m surface white

SKU: AL-S2-W Categories: LED strip accessories, LED strip aluminum profile set, LED strips Tag: 6920057020919

Technical information

Product size: 14 x 7 x 2004 mm

Color body: white

Mounting spot: surface

About the product:

LED anodized profile, frosted cover, 4 pcs. end caps, 4 pcs. anodized aluminium mounting clips, 4 pcs. screws.

The Eurolight LED strip profile surface mounted with anodized finish and frosted cover is a high-quality accessory designed to enhance the aesthetics and functionality of your LED strip lighting installations. This profile is specifically created for surface mounting applications, providing a sleek and professional look to your lighting setup.

The anodized finish of the profile adds durability and corrosion resistance, ensuring long-lasting performance and maintaining its pristine appearance over time. The smooth surface also enhances the overall appeal of the installation, adding a touch of sophistication to any space.

The frosted cover of the LED strip profile serves multiple purposes. Firstly, it acts as a diffuser, softening the emitted light and reducing glare. This creates a pleasant and evenly distributed illumination, ideal for ambient or accent lighting in various settings. Additionally, the frosted cover protects the LED strips from dust, dirt, and physical damage, extending their lifespan and preserving their quality.

The LED strip profile is compatible with various types of LED strips, allowing for versatile usage in different lighting applications. Whether you are using single-color, RGB, or CCT LED strips, this profile can accommodate them effectively.

Installation of the profile is straightforward, thanks to its surface-mounted design. It can be easily mounted onto any flat surface using screws or adhesive, providing a secure and stable attachment for your LED strips.
